

## World Class Project Management

**Course Leader: Mark Crowne PMP, Principal Consultant, *ChangeBEAT***

---

### **Who is it for?**

All team leaders and project managers involved in the management and delivery of technology projects, and those charged with implementing and improving project management methodologies will benefit from this course.

### **What it is about?**

Investments in technology projects are increasingly judged by the business return against perceived commercial risk. Customers expect suppliers to manage commercial risk and commercial return as well as the traditional areas of function, cost and time. As a project manager, new skills, tools and approaches are needed and traditional project management methodologies need to be improved.

To address these issues, the technology industry is increasingly turning to the Project Management Institute (PMI), the emerging worldwide authority for project management. PMI publishes the Body of Knowledge (PMBOK<sup>®</sup>), containing the generally accepted sum of knowledge in the project management profession. Best practice for project delivery in the technology solutions sector must embody the relevant parts of this knowledge in the delivery methodology.

In this one-day hands-on course Mark Crowne PMP, Principal Consultant at *ChangeBEAT*, takes a practical view of managing projects by adopting best practice from PMI. He explains why many companies are opting for a very simple but highly effective approach focused on delivering commercial value.

### **How do you benefit?**

- Understand the fundamentals of technology project management
- Understand the key features of the PMI Body of Knowledge (PMBOK<sup>®</sup>)
- Understand a pragmatic project management framework which can be used to improve project success in their own organisations
- Review and practise simple pragmatic tools designed to deliver more successful projects

## Course overview

- Industry norms
- Understanding success criteria
- The fundamentals of technology project management
- Overview of the PMI Body of Knowledge (PMBOK®)
- Project risk identification
- Project scope planning
- Project planning
- Project initiation
- Project monitoring, control and reporting
- Project completion
