

Avoid Project failure – The Blueprint for Project Success **One day Introductory workshop for Delivery and Programme Managers**

The critical success factors that most influence project success

Course Leader: Mike Watson, Managing Director, MW Project Management Services Ltd

Who is it for?

Delivery Managers and Programme Managers who wish to improve the capabilities of their Project Teams.

Delivery Managers and Programme Managers responsible for Project Managers who wish to be introduced to a consistent and repeatable coaching approach which enables them to manage their project management teams to project success plans with a focus on leading performance indicators rather than limited retrospective time and cost data.

What is it about?

This one day overview workshop examines the reasons why IT projects fail and introduces you to a unique approach called "Project Success Planning" (PSP) which identifies and focuses on those critical success factors that most influence project success.

Project Success Planning provides a bridge to capitalise on traditional APMP and PRINCE2 training and to convert this knowledge into profitable application for Project Management teams in the workplace.

A case study will be used to illustrate the use of a project health check diagnostic against the critical success factors. Working in teams delegates will then develop a Project Success Plan to address the deficiencies exposed by the health check.

How do you benefit?

This workshop provides Delivery Managers and Programme Managers with a clear insight into the critical factors that influence project success and a set of reusable tools and diagnostics to enable the creation and maintenance of Project Success Plans.

An understanding of how PSP will significantly improve the capability of Project Managers to manage their projects to successful conclusions in terms of cost, time and customer expectations.

An overview of how to improve your ability to coach your project management teams to greater success.
