INTELLECT eGOVERNMENT GROUP

Intellect has 1000 members comprising organisations both large and small from the UK's information technology, telecommunications and electronics sectors. Intellect is a vital source of knowledge and expertise on all aspects of the hi-tech industry.

Intellect's flexible approach, using a mixture of standing committees, interest groups and issue based task-forces, enables us to work effectively on a wide variety of topics of real importance to the industry. Participating in this work brings benefits to the individual too: greater insights into markets; valuable business contacts and increased personal profile are just some examples.

2005

Information Technology Telecommunications & Electronics Association

▶ Who are we?

The eGovernment Group represents information technology member companies who supply into the government markets. With over 235 companies registered for the group, we encompass the full range of suppliers into the government sector, including major providers of information technology systems and services, consultancy firms and a large number of small and medium organisations.

The group has a programme of regular briefings and discussions with customers and influencers, throughout central government, local government and devolved administrations.

The eGovernment Group is of tremendous value to both industry and government and we invite you to support us in our future work.

▶ What do we do?

Through our various activities, we seek to create an environment in which our members can be more successful in business with the Public Sector by:

- Helping members maintain a high level of awareness of developments within the eGovernment agenda and provide a channel for government and industry to discuss policy, strategy and implementation issues
- Encouraging networking and collaboration between members to enable the delivery of effective IT enabled business change into government
- Influencing policy and decision making and behaviours in the public sector
- Promoting the interests of smaller Intellect member companies and encouraging the government to create an environment in which small, specialist companies can do more work both directly with government and through larger companies in the development of eGovernment solutions
- Creating a positive image of our industry in the wider public, the media and our customers

▶ How are we going to achieve this?

Group activities include:

- A programme of regular briefings from key players in the field
- Lobbying/campaigning on issues identified as priority
- Production of guidance and white papers

We shall address the priorities of our members by:

- Promoting the achievements of the industry in delivering with government against policy objectives
- Selling to government
- Delivering to and with government
- Supporting government with the CIO agenda

▶ How do we support government?

The eGovernment Group seeks to create an environment in which the industry can most effectively contribute to the 'e's of Ian Watmore's e-Government agenda: **Efficiency, Effectiveness and Employee Experience**, focusing on:

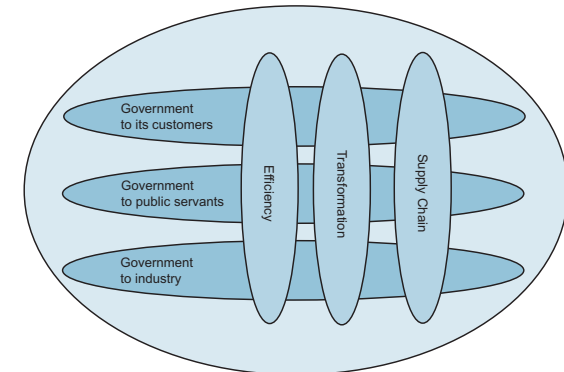

- Transforming services to citizens
- Transforming the back-office in the government
- Building capability in government and the supplier community
- Safeguarding security and privacy

We shall do this by contributing industry expertise on:

- **Efficiency:** reflecting joint OGC/eGU agenda on the implementation of the Efficiency Programme
- **Transformation:** reflecting e-Government Unit's agenda
- **Supply Chain Management:** to consider issues such as the OGC Model Contracts; championing the interests of Intellect members; improving the reputation of the IT industry; better access to the public sector market place and the adoption of best practice

Addressing the two-way interaction of the Public Sector with:

- Their customers (citizens and businesses)
- Public Servants (employees)
- Industry (suppliers)
